1 INTRODUCTION

Ejob is an online platform accessible via mobile devices and computers. It is available for everyone whether they are into cryptocurrency or not. The global economic state is relatively turbulent which has left so many skilful and qualified workers unemployed.

Ejob is an alternative virtual platform designed to create jobs for everyone worldwide.

For example;

Let's say you have a skill in computer programming, but all your efforts in finding a job seem to be in vain. Ejob gives you the chance to share your qualifications with the whole world and create your customer base at all levels:

EJOB
THE UBER OF ALL
JOB PLATFORMS

international, national and local.

With Ejob, individuals will be opportune to start their freelancing activities by promoting and selling their services to a global market. A professionally written job description on the platform can attract a vast client base and offering exceptional services will get you great reviews from customers which in turn will get you better placement on the platform, and this means your advert gets to show up more among primary search results in the EJob platform.

To maintain a high level of professionalism on our platform, our sellers are categorized as beginners and professionals on different levels.

The categorization into beginners and professionals, gaining E-ratings do not only optimize your adverts' visibility on the platform but also promotes sellers' growth on the professional's section where freelancers with high ratings get to demand higher prices for the services they offer.

1.1 WHY CHOOSE EJOB?

The freelance space has been faced with so many limitations such as fake reviews, delayed payment to service providers, limited payment issues but the EJob Platform is employing the blockchain technology to completely revolutionize the global freelance network and give every skilled individual on the planet an opportunity to exchange their skill for money.

1. Low transaction fees.
2. Advertising support of your business.
3. Low transaction fees as they can be paid using the Ejob token
4. Transparent and decentralized review system.
5. Payment in popular cryptocurrencies.
6. Global markets access.

As a potential freelancer on the EJob platform, your country or geographical location does not limit you as you can start offering your services in exchange for financial gains. As individuals living in a developing country, all they need to turn their creativity and skill into financial gain is just an internet connection.

Services offered on Ejob are not just limited to digital skills only but is opened to any skill possessed by the potential freelancer such as construction skills, painting, electrical jobs and host of others.

To get started, all you have to do is create a profile on EJob and list your jobs with professional job descriptions. Once you start offering these services and getting good reviews from clients, your client base will begin to grow exponentially, and satisfied customers will recommend your services to other people too.

1.2 WHY THE BLOCKCHAIN TECHNOLOGY

At EJob, the Blockchain technology is a vital and irreplaceable part of our ideas, beliefs and successes. The use of decentralized and distributed ledgers and the execution of smart contracts will result in a sheer, irrevocable, inviolable and unauthorized power.

Fast and no chargeback payment transactions

All payments among system participants (Clients and freelancers) will be processed using the EJOB token based on a cryptocurrency model of exchange. This will ensure a fast and reliable transfer of funds, usually in a matter of seconds. Taking into account the existing FIAT payment processors, the transaction can take up to 72 hours to be confirmed, depending on the delivery time and the distance between the sender and the recipient.

Payments security

Utilizing the smart contracts, EJob will ensure that all justly deserved earnings of the freelancers and professionals will be received. The nature of the job and cost doesn't matter either fixed price or hourly based, as the funds will be held in advance, before starting the actual work and transferred at the right time when both the business owner and the freelancer/professional agree that the negotiated requirements are fulfilled. In case of work dispute, a group of experts will be engaged in the resolution process so the final decision will be determined by their votes in a transparent way, not relying only on a single decision maker.

No data manipulation

Independent platforms in the market often suspend accounts in unclear circumstances, resulting in frozen income and the inability to accept new jobs. This is a catastrophic scenario for people who depend on the benefits of these platforms, who have worked hard to build a professional reputation and professional network. Unfortunately, the same negative impact is also noticed for the owners, the breakdown of job offers at the end of the employment campaign can generate significant delays and costs. On the other hand, some parties may benefit from unfairly manipulated evaluations and audits.

2 AN OVERVIEW OF THE EJOB ECOSYSTEM

2.1 HOW IT WORKS

EJOB Ecosystem:

The EJob ecosystem is a digital, decentralized marketplace specifically built to bridge the gap between skilled individuals and those who require their skills and services.

The blockchain and smart contract technology is fully integrated into the ecosystem to provide a better exchange of services and payments in the EJOB marketplace.

Beneficiaries of the EJOB ecosystem:

The Major recipients of the EJob marketplace are the Buyers and professionals/skilled individuals.

The Buyers:

The buyers in this context refer to businessmen, individuals who require both digital services and non-digital services for their businesses or personal use. The Ejob professionals and skilled individuals determine entirely the services found on the Ejob platform as they could range from web design, Construction, Painting, Drawing, video editing, architecture/building, Translation, Programming and others.

To start buying,

1. Search for service
2. Buyers can use the search feature to find services they need on Ejob.
3. Buyers can search for skilled professionals within a specified distance/location
4. Connect human service provider
5. After searching for required service, the search results display a list of human service providers offering such service. This leaves the buyer to make a choice and proceed to connect with the desired service provider
6. Communicate with the desired seller/professional to discuss job
7. Make payment to our escrow service via smart contract
8. Wait till seller completes job before reviewing and approving the release of payment

Professionals/skilled individuals:

The sellers on Ejob refers to individuals, businesspeople and professionals who offer to sell their skills or services on and via the Ejob platform. There is no limit to the kind of services and products which can be provided and sold on the platform.

All interested service providers and sellers must sign up on the Ejob platform and setup their profiles before they are eligible to make sales.

To start offering skills and services,

1. Pricing your products for sale in Ejob
2. Users receive notification upon order received
3. Distribution of work on the time of service delivery
4. The Ejob system is designed to enable buyers to discuss details of the business/transaction with customers.
5. Receive payment when the two parties confirm completion
6. Revenue is strictly confidential with blockchain security technology

2.2 AN ALL ACCOMMODATING SERVICE PLATFORM

The Ejob ecosystem is all accommodating;

This means that all manner of services from high-end to low-end businesses irrespective of cost can be offered on the platform

- Providing service packages exclusively for high-end businesses.

The Ejob platform will be attracting and reaching out to top professionals in several area of specialization to join the platform and offer their high-end services. This is in a bid to ensure to attract high-end businesses to the Ejob ecosystem.

Exclusive service packages will be created to cater for the needs of high-end businesses. These packages would range from (\$3,000 and above) and such clients will be given top priority and the best professionals available on the platform.

2.3 COMPONENTS OF THE EJOB ECOSYSTEM

The components of the Ejob platform are outlined below;

Ejob Back Office:

This is proposed for designated Ejob staff only. It is designed to allow Ejob staff and customer service agent with access to resolve a client's or freelancer's issue quickly.

Anti-Fraud System:

Our anti-fraud mechanism is embedded in our ecosystem to promptly spot fraudulent activities such as fake reviews acquired to cheat the system into getting better placement as a freelancer, undeserved refunds for jobs well completed, protections of clients against fraudsters who might lure them out the platform to scam them of funds and others.

Ejob Marketplace:

The Ejob marketplace is poised with the responsibility of creating a conducive, transparent and authentic environment where freelancers, professionals, and clients around the world can connect for the rendering of services, hiring of professionals for jobs and so much more.

Furthermore, it will serve as a mechanism for business representatives, professionals across the globe to conduct business and trade services using the Ejob token as a means of exchange and payment.

Billing Platform

This following example would better explain the whole process of how fees are estimated.

Bob painted the walls in Simon's house.

- Supplies: \$100.00
- Working hours: 10
- A painter works for \$25.00 an hour
- The total cost would be \$250.00 for the working hours plus the \$100.00 worth of supplies.
- The E-platform Fee is only 5% of the total amount.
- Sharing on social media -1% fee
- Rating -0.5% fee
- Paying with cryptocurrency -1% fee
- Paying with Ejob tokens -0.5% fee

Since this platform is made for everyone in the world, we give our users the freedom to pay in any method:

1. Standard payment method from the user's country
2. Credit card
3. Cryptocurrency

However, we encourage people to pay with cryptocurrency instead of credit card or any other payment methods. Users are allowed to pay with the following cryptocurrency. Paying with Ejob tokens will give you a 0.5% discount as mentioned earlier. Using all of the discounts listed above will provide you with a 3% fee discount on your orders.

- BTC
- ETH
- LTC
- Ejob tokens

Jobs search based on location:

Users can search for professionals via the Ejob platform using our location search feature. With this feature, users can source for professionals based on proximity.

Case Study:

Peter needs a painting job done with specs: 40m2 Colour: White, Proximity: 50 Miles radius,

our app/platform will automatically look for painters that are connected to the Ejob platform who fit the job description and who are close to that area.

3 BUSINESS FEATURES AND ADVANTAGES

3.1 FOR BUSINESSES, SKILLED PROFESSIONALS AND FREELANCERS

Ejob will operate a low fee commission model for getting any project delivered. In comparison to the current freelance platforms such as upwork, fiverr and others, they gather enormous charges ranging from 10% to 25%. With Ejob, nobody pays exorbitant fees to any middleman.

- **Unbiased dispute management**

We firmly believe in the rare cases of disputes they should be resolved by unbiased and independent subject matter experts only. Following this belief, we came up with our dispute settlement process that guarantees business owners will get the best quality and freelancers will be protected by unfair employers. Furthermore, it enables our token holders to earn additionally from participating in election and evaluation of the experts that are eligible to resolve disputes. For more details, see our “dispute settlement section”.

- **Decentralized Review and Rating System**

At Ejob, there is no central authority to in charge of job reviews, ratings, achievements, earnings, and others. Everything happens on blockchain which makes it decentralized, uncensored and immutable. This will allow only the best freelancers and skilled professionals to excel and thrive on the Ejob platform. With this, project owners or business representatives can regain confidence in the trusted source of data to base their decisions.

- **Portfolio acknowledgement**

Building a freelance and professional reputation takes time, and so at Ejob, we will ensure that a freelancer's previous reputation on other freelance platforms are not put to waste when they decide to join the Ejob platform. We are setting up an easy profile setup and customization which will enable freelancers to easily migrate their portfolio, from previous platforms into the Ejob platform. We believe with this innovation, already established freelancers would not have to start from building their reputation from scratch. This will also help skilled professionals having genuine portfolios.

- **Team Building - work as a team and get hired as a team**

It is a well-established fact that professional organizations are far more productive than a small group of individuals and we intend to promote this idea on our platform. With the Ejob freelancing platform, freelancers will be able to form alliances, teams and apply for projects as a team unlike the traditional freelancing platforms out there.

3.2 FEATURES OF THE EJOB PLATFORM

Skill/service vetting and recognition

How can employers, project owners or individuals be sure of hiring the best talent?

A key feature of Ejob is our talent recognition program. This program will allow business owners, individuals who require certain services to delegate to us the time-consuming and sometimes frustrating task of finding and hiring freelancers.

By proactive vetting of the experts and professionals working on the platform, we will be building a database of pre-selected and time-tested top talent. If the project requires proven expertise, we will be able to assist in reaching it.

Skill scrutiny based on the project criteria, language tests and interviews, soft and technical skills assessment, checking certifications, verifying identity and others are just some of the actions we can perform on behalf of the project owner. The outcome will be an index of the best available talent, freelancer or skilled professional that fits the requirements. The list of suggested freelancers will be backed with all the information generated through the process, plus the expert's track record and analysis on how they will fit the project including the cost. This will enable the business representative or project owner to do their choices based on carefully selected and validated data. A final round of interviews can be organized and facilitated by us so the business will get a feel for the applicants and hire the best.

Decentralized dispute resolution model

Ejob will implement a dispute settlement process via a Decentralized dispute resolution model.

Dispute resolutions on traditional freelancing platforms are usually one-sided and in most cases leaves the freelancer at a loss. We believe dispute resolution processes should not be handled by selected individuals only but by the community to arrive at more objective resolutions.

We have looked at and analysed various models and picked the best option to do so.

Based on our model, disputes will be handled by experts in the similar field of expertise which are voted by the community. This is why Ejob will implement a unique dispute resolution model which empowers the community while keeps the decision making in the hands of experts and incentivises them to do their job correctly.

Skill management:

To ensure clients and business representatives spend a considerable amount of time searching for freelancers with the specific skill set to handle their jobs, the Ejob platform is designed such that the freelancers and professionals will have the ability to list out and manage their skill set on their user profiles. This will be used as a significant tool by the client when searching for the best freelancer/professional to hire for their project.

24/7 Customer Service:

This is a unique feature of the Ejob platform, as issues are bound to occur wherever transactions occur. The Ejob platform will be putting together a well-trained customer service to always attend to clients and freelancers queries whenever the need arises. The team will be available 24 hours a day and seven days a week.

Chat:

For every settled transaction between a client and a freelancer, there has to be a medium of communication between them. At Ejob, we are building a world-class chat feature where clients, users, freelancers and project owners can easily meet to discuss their businesses, pricing and lots more.

3.3 JOB CREATION FOR EVERYONE (THIRD-WORLD (3RD) COUNTRIES INCLUSIVE)

The Ejob platform was designed to solve the problems faced by traditional freelance platforms and also to create jobs for skilled individuals having no means to start-up their own businesses. This feature is designed to enable investors and the platform to invest in people living in very poor parts of the world. These people having no means to start-up their own business can easily sign-up on the ejob platform and get the next push they need to start their own business.

By this way Ejob really stands for Jobs for everyone in the World, irrespective of how poor everyone deserves to start a business and to make money.

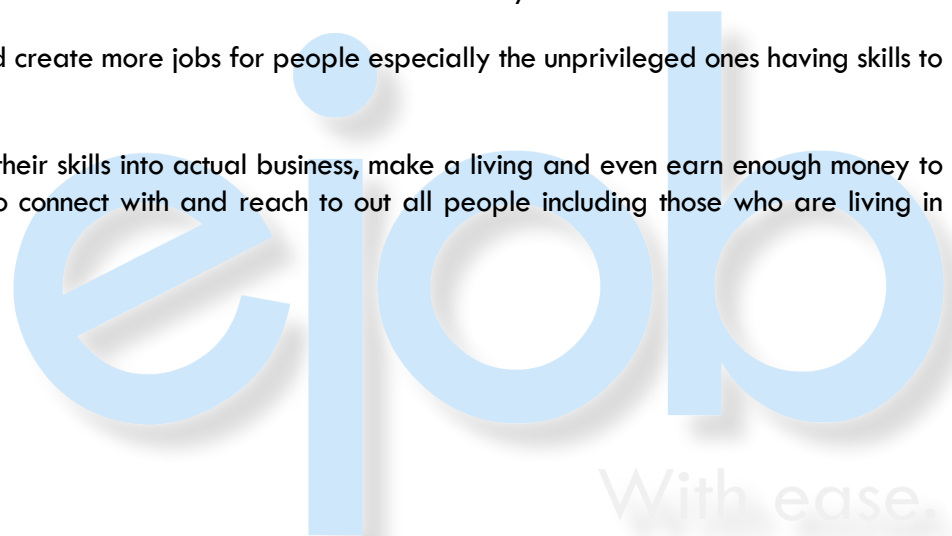

We aim to achieve this major goal by helping starters in Africa invest by giving them micro loans to begin their own business via the Ejob platform. By taking a certain percentage fee from each project finished on Ejob we can help anyone with a business plan in a third world country make a living.

Case Study: A Skilled Shoe Cobbler

A man in Africa is skilled in shoes making but he does not have the required funds to start his own business. If he can provide Ejob with a proof of his craft skills and a tight business plan, we can him start his own business and turn his dreams into reality.

This way, we believe we can help third world countries grow and create more jobs for people especially the unprivileged ones having skills to offer.

Our goal is that people anywhere in the world is be able turn their skills into actual business, make a living and even earn enough money to own a phone on which to receive cryptocurrency and finally to connect with and reach to out all people including those who are living in developing countries.

EJOB AI – Using AI to connect people

Our sole mission for Ejob is to provide jobs for everyone worldwide irrespective of geographical location. Ejob consists of young minds carefully harnessing modern technology available to benefit their cause.

The primary goal is to connect people with different background, beliefs, experiences, uniqueness, preferential and treatment. Due to the uniqueness in individuals and their unpleasant experiences with companies in the past, it takes time to satisfy different individuals and thereby finding the right fit for them.

One of the enticing features of our future developments and innovations is creating a function which acts as a personal assistant - this will come in the form of an AI.

The EJOB AI will be well versed in individuals beliefs, interests, values, and priorities. With this feature, whenever the user inserts a search query (asks a question), the EJOB AI will match the user to one single person or company. We are not interested in showing you 100's of choices; we are interested in showing the perfect results and fully meeting individuals needs.

What's Artificial Intelligence (AI)?

The world has been on a quest to make computers act like human beings, in this day and age we can say that we are getting there. There are already lots of working examples, we can say for the fact that everyone that uses the internet today has previously interacted with AI to provide you experience and hopefully be of value.

Perfect result?

Yes, the perfect result, it will take some time to get to this point where the EJOB AI has to interact, learn and consume a lot of data before getting here. There are already people doing great work in the field of AI, and more specifically in letting AI find the right people for you but we aim to be better.

Road to AI

In the genesis of ejob, we will focus on gathering data from our users to understand every single one of them to know how to serve them best based on their unique differences. This is all in preparation for giving the AI all the data it needs.

Feeding & Training the AI

When our AI is finished, we're going to feed the EJOB AI all the data we've collected in the previous period. In the first stages, EJOB AI will research the data and try to make the right connections. Our team will research the results and will do the necessary tests to see and understand the quality of the connections/results.

Future steps in data

After feeding all the data and training the EJOB AI there will be lots of other datapoints to discover. The EJOB AI will be smart and resourceful enough to ask the users for input, so whenever the user asks a question in terms of ordering a service, the AI will ask for more input from the user to make sure the result matches the request and the specific person. This is all part of our mission to create the perfect result for our users.

What about privacy

The only goal with data will be to service you and create an environment we're millions of people can connect to provide each other with the value there looking for. Ejob will never sell data to any 3rd parties or use this for the sole purpose of making money.

Case Study

The buyer - Alex

Alex wants to be serviced in a unique pattern; he wants a perfect job done and nothing less as he would not tolerate mistakes of any sort. Alex also wants to pay bitcoin and needs the job to be done by tomorrow at 2 o'clock. Of course, Alex knows he's asking for high quality and is also willing to pay the necessary. The above shows Alex's uniqueness in tastes and preferences.

The Freelancer - Peter

Peter has a working experience of decades and so happens to be someone that takes his time to make everything look perfect, no questions asked. Peter knows his value and is willing to reject customers who do not meet up with his service price. Also, Peter is crypto-educated and is willing to accept Bitcoin payments.

Other data

- Alex and Peter live near each other.
- Peter is someone that asks the right questions at the right time.
- Peter had more than 200 customers similar to Alex

This situation above is a simple example where the EJOB AI would be of great value.

“Freelancers now make up 35% of U.S. workers and collectively earned \$1 trillion in the past year, according to the “Freelancing in America: 2016” survey released this morning by the Freelancers Union, based in New York City, and the giant freelancing platform Upwork, headquartered in Silicon Valley. The Freelancers Union represents 300,000 members.” – Forbes

The freelance/gig industry is comprised of freelancers, professionals, home service providers, digital service providers and self-employed individuals and others. The industry is experiencing an exponential and geometric growth at the moment as more professionals and individuals are seeking to gain complete freedom of their careers and how they sell and offer their skill and service. It is projected to increase towards 40% of the global workforce in the next decade, with over 200 million workers and with a total annual transaction volume approaching \$2trillion.

5.1 CHALLENGE

The traditional centralized freelance industry is faced with particular challenges which we aim to discuss in this section. Freelancers and clients meet these Challenges on freelancing platforms such as Upwork, Fiverr, PHP, and others.

1. Freelancers don't receive 100% of their revenue after completion of a job as 5% - 30% goes to the intermediary or platform. For example, Fiverr takes 20% off all the income made by sellers in every sale made.
2. There are limited ways for users to receive their funds, most especially for users not in the US or Canada.
3. Delay in funds clearing: Freelancers are faced with this challenge as they are forced to wait several days after completion and settlement of a job/transaction before their revenues are released to them.

It is only reasonable for freelancers to want their funds released to them after completion of a client's job. This is entirely understandable as getting paid online could be cumbersome.

With Fiverr, you need to wait for a buyer/customer to complete an order before the project is marked as completed, after which you would have to wait for another 14 days for funds clearance before funds become available for withdrawal.

Cryptocurrency payments are instant and having no limitations, even across international borders. This is useful to freelancers as cryptocurrency can be easily exchanged, so funds can be withdrawn and used as soon as transactions are marked as settled.

The blockchain uniqueness lies in its potency to tokenize any industry/market and the major problem faced by buyers/employers and sellers/freelancers on the current platforms is trust.

Cryptocurrency tokens and smart contracts can be employed in strategic ways to incentivize everyone to act professionally and reasonably at all times. Ejob aims to tokenize reputation, and assigning it a real market value on the Ejob platform. This will prove to be a more secure environment for freelancers and employers who would patronize the platform.

Decentralization can also mean fairer, distributed dispute resolution, leading to better contract outcomes, more accurate ratings, and less centralized authoritarian control.

Applicable problems and solutions:

An overview of the challenges will be addressed below:

1. Difficulty in getting people to order and pay for skills/services
2. Difficulty in getting clients to close deals so freelancers can receive payment
3. Clients leaving undeserving/negative profile reviews

Case 1:

“There are thousands of skilled individuals and professionals around the world seeking employment and individuals who would patronize them but they don’t have the right channel and platform to showcase their skills and services”

The Ejob platform will successfully bridge the gap between skilled professionals, freelancers and individuals/businesses who require these skills and services. We are creating an environment where these professionals and skilled individuals can showcase their services.

Case 2:

“Unexplained suspension of a freelancer’s account without prior notice or explanation remains a freelancer’s nightmare on traditional freelancing platforms. How does Ejob handle this?”

This problem causes the trust in freelancing platforms to deteriorate as freelancers are confronted with the reality that they can lose their source of income at any given time, making freelancing platforms too insecure to be a sole source of work for Freelancers. On the Ejob platform, this is an impossible occurrence because we don’t have a single authority who can suspend accounts unnecessarily without explanations and prior notice.

Case 3:

“From experiences on different freelancing platforms, getting paid by your Client often proves to be difficult since they have to close a deal before payments are released. Is there a way payment for work done must be completed?”

Once a transaction has been put in motion, the Client’s money is frozen until the contract is fulfilled by the freelancer. If a client is not satisfied with work of the hired Freelancer, he has the option to request for a refund while the Freelancer has the same opportunity available to him in case he received an unreasonably bad review or feels the clients are trying to cheat. Intentional bad reviews will lead to clients losing their accounts.

5.2. COMPETITIVE ADVANTAGE

Our major competitors in the freelancing and digital marketplaces are the top centralized freelance platforms and global markets as listed below;

- Fiverr
- Upwork
- Codeable
- PPH – People per hour
- Freelancer.com

Ejob will employ the blockchain technology to disrupt the freelance digital marketplace entirely and as such will have its advantages over the above listed centralized platforms.

Platform	Nature	Funds release	Job	Payment system	Transaction fees	Freelancers' Revenue
Ejob	Decentralized	Immediate release of payments to Freelancers/ skilled professional after job completion	Digital and non-digital	FIAT, Cryptocurrency & Ejob Token	Very low	99%
Fiverr	Centralized	14 days after job completion	Digital only	FIAT only	High	80%
Upwork	Centralized	5 days after completion	Digital only	FIAT only	High	80%
Codeable	Centralized	Not immediate	Digital only	FIAT only	High	85%
PPH	Centralized	Not immediate	Digital only	FIAT only	High	80%
Freelancer.com	Centralized	Not immediate	Digital only	FIAT only	High	87%

5.3 WHY CHOOSE EJOB?

Our uniqueness lies in our ability to grant users much transparency as possible when it comes down to payment. The money paid will be taken in escrow and only be released once the team of Ejob verifies that the job is done and delivered including the money needed for tools and supplies. Ejob will make sure that that sum of money is spent conveniently.

Ejob is not designed to only offer online jobs like other centralized freelance platforms and skill marketplace; our goal is to be worldwide known as the Uber of all Job platforms. This means that if you want to get a job done by someone skillful but you seem to find it difficult to trust somebody enough to build up a professional relationship with him/her?

Ejob allows face to face communication with the seller.

Which means that all along the process, you would know exactly who is it exactly that you are dealing with as their profile holds key information about them including their pictures.

Each seller's profile on Ejob includes a description about him/her personally, his/her profession, background and qualifications. Details about his/her working schedule, delivery timing and prices are also at your disposal as a user and the feedback he/she has been given by other costumers and even how much tips he/she has earned.

Ejob is super transparent all for the users' best interests. It is designed in such a way that it protects you and your money. It is as easy as calling for a taxi only you know exactly who the driver is, how good exactly is he/she in his/her job and a lot more details.

No Project Limit:

Is it a big project you want to get done? It's no problem for ejob. You choose and set up a group of people connected to the platform to work on it together. As far as payments are concerned, everyone will receive a fair share of the work he/she has performed. In this way, big businesses can work together for super big projects.

No time constraint:

Is this project too big to be done within a month? Schedule payments in escrow. When certain milestones and goals are finished, the Ejob team will verify everything and release a certain amount of money or tokens to the people that had their work done on the project.

Ejob can also be used to find people that want to invest in a business. If you have a business plan, you can post it online, and Ejob + community can give ratings on it.

For example, you want to start your own cookie business. Share your plan on the Ejob platform, and as such, you can find investors. Once everything is settled and verified, the frozen money will be released.

Anything is possible with the Ejob platform. Anyone that wants to make money but can't find a way to promote him/herself can simple set up his profile with and a little skill's description, and he is ready to go.

6 EJOB TOKEN SALE

6.1. BASIC TOKEN FEATURES

Token name	ejob
Token symbol	ejob
Token type	ERC20
Start date	14th December, 2018
Total number of tokens	60.000.000.000

6.2 TOKEN DISTRIBUTION

- Circulating Supply: 37,000,000,000 (62%)
- Legal: 2,000,000,000 (3%)

3% of the total Ejob tokens will be allocated to settle all legal matters and this amounts to 2,000,000,000 Ejob tokens

- Team: 11,000,000,000 (18%)

18% of the total Ejob tokens will be allocated for the team and this amounts to 11,000,000,000 Ejob tokens

- Marketing: 4,000,000,000 (7%)

7% of the total Ejob tokens will be allocated for Marketing and this amounts to 4.000,000,000 Ejob tokens.

- Development: 6,000,000,000 (10%)

10% of the total Ejob tokens will be allocated for Development of the Ejob platform and this amounts to 6,000,000,000 Ejob tokens.

5.3 TOKEN MODEL

To support the early adopters of the Ejob token, Early adopters will buy the token at exceptional prices and discounts which will not be offered in any of the future sales or affiliate program. By partaking in the Ejob token sale, you will have the assurance of the best possible price and will be considered as an active sponsor and participant in the development and establishment of Ejob platform and ecosystem as a leader in a contemporary freelancing.

The Ejob token is a vital component of the Ejob ecosystem. As our utility token, on top of transferring funds with a low commission, it gives various benefits to its holders.

As the platform evolves, our Ejob community will grow both in size and quality.

While stimulating the possession of Ejob tokens by incentivizing the token holders with exclusive benefits, the demand and the value of Ejob will dramatically increase. Token holders will be entitled to access our premium features for free.

As well as able to earn more and more by helping us shape our community. Possession of the Ejob token gives you a unique ability to participate in our talent recognition program that allows you to earn additional income by helping us evaluate freelancers. Also, by participating in the resolution of disputes, markers will accumulate other characters. The Ejob token will be the key to Ejob's long-term sustainable success.

TOKEN LIQUIDITY AND EXCHANGE LISTING

As Ejob implements the ERC20 ethereum platform, it will be compatible with most of the existing wallets and exchanges, guaranteeing high liquidity.

ROADMAP

2017 EJOB IDEA/CONCEPT

- Birth of the Ejob concept
- Research on the digital platform Ejob
- Strategically planning on materializing Ejob ideas/concept
- Establish a team to develop the project

2018

Q1 - Documentation

Publish Whitepaper

Q2 - Develop a privacy policy for transparently distributed services between buyers and sellers on the Ejob platform

Q3 - Token Sale

- Start global sales of the Ejob token

Q4 - Design

- Platform design and technical demonstration

2019

Q1 - Test the services of the algorithm in the ecosystem on the Blockchain platform, the ability to extend the decentralized application to third parties.

Q2 – Analyzing market ecosystem for an overview of potential services

Q3 - App Beta Test

- Private closed beta

- Open beta launched to public and improve the app

Q4 Alpha Test

In-house testing of functional Ejob Prototype

- **Community Benefits**

Establishing global user base

- **Expand the ecosystem of Ejob**

ejob
With ease.

DISCLAIMER

PLEASE READ THIS DISCLAIMER SECTION CAREFULLY. IF YOU ARE IN ANY DOUBT AS TO THE ACTION YOU SHOULD TAKE, YOU SHOULD CONSULT YOUR LEGAL, FINANCIAL, TAX, OR OTHER PROFESSIONAL ADVISOR(S).

The information set forth below may not be exhaustive and does not imply any elements of a contractual relationship. While we make every effort to ensure that any material in this Whitepaper is accurate and up to date, such material in no way constitutes the provision of professional advice. Ejob makes no guarantee, and accepts no legal liability whatsoever arising from or connected to, the accuracy, reliability, currency, or completeness of any material contained in this white paper. Investors and potential Ejob token holders should seek appropriate independent professional advice prior to relying on, or entering into any commitment or transaction based on, material published in this white paper, which material is purely published for reference purposes alone. Ejob tokens will not be intended to constitute securities in any jurisdiction. This Whitepaper does not constitute a prospectus or offer document of any sort and is not intended to constitute an offer of securities or a solicitation for investment in securities in any jurisdiction.

IMPORTANT NOTICE

Please read the following notice carefully before proceeding to read this document prepared by the Company (the “Whitepaper”). This notice applies to all persons who read this document. Please note this notice may be altered or updated. The White Paper has been prepared solely in respect of the Company’s crowd sale of the Ejob tokens (“Ejob”) to be known as “Ejob tokens”. No shares or other securities of the Company are being offered for subscription or sale in any jurisdiction pursuant to the White Paper. The White Paper is being made publicly available for information purposes only and does not require any action to be taken by the general public or shareholders of the Company. The White Paper does not constitute an offer or invitation to any person to subscribe for or registration shares or any other securities in the Company. The shares of the Company are not being presently offered to be, registered under Securities Act of any country, or under any securities laws of any state. No person is bound to enter into any contract or binding legal commitment in relation to the sale and purchase of Ejob tokens, and no cryptocurrency or other form of payment is to be accepted on the basis of this White Paper.

ELIGIBILITY

You are not eligible and you are not to purchase any Ejob tokens if you are a citizen or resident of a geographic area in which access to or ownership of the Ejob token is prohibited by applicable law, decree, regulation, treaty, or administrative act.
